

GLOMESH FLOOR PADS

Regular Speed: The darker the colour the more aggressive the pad

Black	Stripping	For regular speed.
Brown	Dry Strip	For regular stripping or more aggressive cutting back.
Green	Scrubbing	For wet heavy duty scrubbing or cutting back.
Blue	Cleaner	For lighter scrubbing or for less aggressive cutting back.
Red	Spray Buff	For spray or spot buffing. Can be used for dry buffing or very light wet scrub.
Tan	Polishing	Dry polishing buffable finishes. Also has the ability to surface clean while polishing.
White	Super Polish	Dry polishing to a higher shine. Can use water mist to aid obtaining high gloss.

Ultra High Speed: See chart for relationship of polish and machine

Beige 2000	Soft pad for soft to medium finishes.
Jackaroo Lite	Soft pad for soft to medium finishes with natural hair to cut drag, and enhance gloss.
Blue Ice	Soft pad for soft to medium finishes, removes less finish, gives up to 30% greater gloss.
Coco	Soft pad for soft very buffable finishes. Natural coco fibre cuts drag, replaces burnt hair odour with coconut fragrance.
Champagne	For medium to harder, less buffable finishes.
Jackaroo	For medium to hard finishes. Natural hair with synthetics reduces drag, enhances gloss.
Buckaroo	For medium to hard finishes. Has hard aggressive binder and natural hair. Less drag. Great on less buffable finishes.

Choosing the right Ultra High Speed Pad

The burnish process of floor care has evolved from a simple combination of a conventional (175 RPM) machine with 90-100 lbs pad pressure and basic finish to the more complex process today called ultra high speed. With the advent of propane, battery and electric machines with varying RPM capability of 1100 to 3000 + UHS burnishing, it has become very difficult to choose the right aggressiveness in the floor pad to achieve the brilliant shiny floor on a consistent basis. It has been determined that no one pad will achieve the desired result. Glomesh has met the challenge by developing a family of floor pads that will transform that energy generated by the various ultra high speed machines, respond to the finish and create the wet look shine.

Because of the many permutations as a result of the many different machines and polishes available, no one pad is the perfect answer to every situation.

The Glomesh UHS Range is the solution. With a broad range offering options depending on machine and polish, it is possible to find the perfect answer.

GLOMESH

Suggested Usage	Beige	Coco Pad	Champagne	Jackaroo Lite	Jackaroo	Buckaroo	Blue Ice
Propane 2000-3000							
Soft Buffable finish	•	•		•			•
Medium durable finish			•	•	•	•	•
Hard highly durable finish			•		•	•	
Battery 1500-2000 RPM							
Soft buffable finish	•	•		•			•
Medium durable finish			•	•	•	•	•
Hard highly durable finish			•		•	•	
Electric 1500+ RPM							
Soft buffable finish	•	•		•			•
Medium durable finish			•	•	•	•	•
Hard highly durable finish			•		•	•	
Electric 1000+ RPM							
Soft buffable finish		•		•			•
Medium durable finish				•	•	•	•
Hard highly durable finish					•	•	

These are generalised classification based on our market research. We realise that terms and definitions may be different from manufacturer to manufacturer, however, we have used the above information to help determine pad compatibility with the various floor machines and finishes on the market.
